pdf to download. This movie is about 2D physics game with basic mechanics. You can create simple 3D with this 2D game. You can make the game as you want, and so on. And I hope you enjoy it. Hello, this is my first step in the 3D programming. I tried to move a cube in the world. However I have some problems with a code. And so, I decided to make a movie in order to fix it. And I succeeded. First I moved cube with arrow keys, then I fixed the cube with an animation. And finally I made an opengl program in order to make a 3D with only 3*3 axes (x,y,z). And also I made some comments in order to help me to fix the bug. Bugs: - Cube is not moving when I press the key 1. - Box is not moving around the cube. - I tried to make a 3D plot. However the cube is a little bit bigger than the screen, so it's cut and I can not see the whole plot. - I made some algorithms with a boolean variable, they have worked well. However, I think that this was a fault. Please, help me to fix it. Thank you in advance. LK June 25th, 2013, 11:01 PM June 26th, 2013, 01:21 AM June 26th, 2013, 01:31 AM You can try version 4.1. In the end, I guess I am glad I read it, but I don't think I'm the right person to judge, because I'm not the sort of person who would want to go out and kill himself with morphine. Why do I think I
