Description of Related Art In general, in aircraft, sub-systems of the aircraft are hydraulically controlled. For example, the landing gear of an aircraft is operated through a landing gear circuit that includes a control valve, which is controlled by the pilot operating a handle. The pilot operates the handle to apply fluid pressure via the control valve to the

landing gear circuit to extend or retract the landing gear. To increase the number of controls, it is known to integrate the controls of several hydraulic sub-systems into one handle. This can be done using a composite handle, which is similar to a conventional aircraft control handle. However, with a composite handle, the user can apply fluid pressure to the entire composite handle, or, to a component of the composite handle. Also, an overload safety feature is incorporated into composite handles, such as a feature that will prevent accidental actuation of a valve. The composite handle is typically mounted in the instrument panel of an aircraft. Generally, a composite handle is made from multiple hydraulic valves. Each hydraulic valve is mounted to the composite handle to form a circuit associated with a particular sub-system. The pilot applies fluid pressure to the composite handle to actuate the circuit, and in particular, to actuate the valve within the circuit. The housing of the composite handle is typically made from an impact-resistant material, such as stainless steel. The action of the valves of the composite handle causes the composite handle to vibrate. As a result, the composite handle shakes or moves from side to side, which is undesirable. Furthermore, since the housing of the composite handle is made of material that is impact-resistant, the composite handle is relatively heavy. Thus, there is a need for a control handle that is lighter and less expensive than current composite handles. Furthermore, there is a need for a control handle that resists vibrations from actuating hydraulic valves.Effect of adenosine A1 agonists on evoked synaptic potentials in the rat CNS.
