When I tell people I'm quitting drinking, the first thing I say to them is, "I can see your liver." Some of them will look puzzled by my choice of words, but I've yet to meet someone who didn't want to see it, too. But I've been sober for 15 years and I've still got a liver. And it gets called on a lot. Why Alcohol Works on You You have 10,000 liver cells every square millimeter of your body. If you eat a doughnut, that's

10,000 cells in each square centimeter of your liver right then and there. If you start drinking a beer, those 10,000 cells will be used to metabolize the beer. The beer will add alcohol to your system, which is why drinking beer will not cause your liver to shut down (unless you have a particularly large beer belly). Most people don't actually have 10,000 cells each square millimeter of their liver, but we'll talk about that later. The alcohol you drink will pass through the liver and get absorbed. When your liver starts metabolizing the alcohol, it will produce a chemical called acetaldehyde, which is what causes the bitter taste in a
