Marker Monitor is a tool that can collect information about applications running on the computer. It records a list of installed applications, their file versions and URLs, as well as a list of recently opened files. Marker Monitor can monitor applications for any reason, even if you installed the applications yourself. For example, it could be a regular check to make sure that your system has no malware - a no-brainer, but unfortunately, not something you can do from within your browser. Marker Monitor can collect data from all installed applications in the same way as any other Windows application, and it can even run independently of them. So, it doesn't matter which application you're currently using, all of the data will be collected and saved to the selected location. The Marker Monitor interface is designed in a Windows fashion, with a standard layout consisting of three elements. The first element is a title bar that displays the name of the tool and contains a notification area. In addition, you can switch between the names of your collected applications with the relevant button. Once the first window is open, it lists all of
