## DG Nest+

DG Nest+ is the first of its kind. It was created to help you save time and materials when cutting complex shapes. As simple as it sounds, it is actually very efficient. You can measure the number of hours used to make something and eliminate them entirely, thanks to DG Nest+. When we say DG Nest+ is an app, we are not just talking about the term. We are also talking about a very specific program for the industrial market. At least that is what the developer was striving for and it seems like it's definitely on the right track. One can even include the weight of the objects cut in order to make the process more accurate. It's a free application that is designed to reduce the number of hours that are lost. The number of hours that are wasted when manufacturing is a very important metric. What you want to avoid is wasting one-third of the time that you invest in a project. There are simple processes that can be applied in order to ensure that the number doesn't go up. One of the best ways to minimize wasted time is to maximise the use of your materials. The more you reduce waste, the more efficiency you will achieve. This is why the DG Nest+ applicaiton was created. It was made to make sure that your time and materials are spent wisely. What are the features of DG Nest+? If the menu on the home screen is a little bit unclear, DG Nest+ itself can explain things better. The program is very easy to use. Just select the specific material that you want to use. This can be done by selecting the corresponding type of material from the dropdown menu. After selecting the material, you can also go ahead and choose the kind of material that you want to use. There are 20 different types. Among them, you can find cardboard, glass, foam, plywood, liquid, etc. The amount of material that you can use in a specific project depends on the shape you are trying to cut. The next step is to start the process of locating the specific item that you are looking for. The process of cutting a rectangle will always require some pre-thought in terms of where the material and the shape will be fit. Your job is to make sure that you use your material in the most efficient way. That way, you will

### What's New In DG Nest ?

At its core, DG Nest+ is a cutting guide and nesting software that will ensure that all the edges are properly aligned while at the same time minimizing the waste of material. That's pretty straight-forward. What makes DG Nest+ so great is its capability to accommodate any type of material while also carefully calculating where to place each piece. One major drawback we're looking at is the cost of this application. Each additional nesting scenario will cost you \$29.95. However, if you are on a budget, the free trial will do the job for you. DG Nest+ Pros: The word coding on the DG Nest+ website may seem like a catch-all term. However, the creators of this application say that it is one of the things that sets it apart from other nesting applications out there on the market. Yes, you'll still have to purchase a specific cutting guide, but the application will help you to sort out your shapes in a much more efficient manner. We must also keep in mind that even though DG Nest+ is a cutting guide, its algorithm will do a much better job than any other tool you've used in the past. DG Nest+ Cons: If you're not familiar with DG Nest Pro, it will cost you a bit more than DG Nest+. If you've used that software, you're aware of just how intuitive the layout tool is. If you're not, then you'll just have to give it a try. The lack of this application may be a con, but it's probably not a deal-breaker. We'd like to see some more in-depth tutorials on how to use this tool, but if you get started, you'll be using it much more effectively than most people may think. Be that as it may, the million or so folks who use conveyor belts have no need of such mechanization. It's truly simple to do so, especially if you have a conveyor belt: you simply need a microwave and a detector
